W0. Introduction

W0.1

(W0.1) Give a general description of and introduction to your organization.

Asia Pulp & Paper (APP) Sinarmas is responsible for delivering quality products to meet the growing global demand for tissue, packaging and paper. On any given day, our products find their way into the hands of consumers in various branded forms from all over the world.

Started in 1972 with Tjiwi Kimia producing caustic soda, now we run operations across Indonesia and China with an annual combined pulp, paper, packaging product and converting capacity of over 20 million tons per annum. Today, APP markets its products in more than 120 countries across six continents.

Sustainability has always been at the core of our business. We strive to create products and deliver services responsibly through sustainable and innovative processes at every product life stage. Apart from doing our business, we also improve the livelihoods of the communities around us. Our newest sustainability strategy is detailed in our Sustainability Roadmap: Vision (SRV) 2030. The strategy is broken down into three pillars—Production, Forest, and People. We have set ourselves targets for each of these pillars, intending to drive improvement in processes that concern our business, wider supply chain and environmental sustainability. Vision 2030 also details our efforts and strategy in our continued support of the UN’s Sustainable Development Goals (SDGs) and the Paris Agreement on climate change.

Our sustainability strategy has ten targets pillars—Fibre Sourcing, Reforestation, Conservation & Biodiversity, Human Rights & Indigenous People, Community Empowerment, Climate Change, Emissions, Water Management, Solid Waste, and Employee Welfare.

Vision 2030 affects all areas of our business. It is a minutely detailed strategy, with firm targets surrounding sustainability, that uses Company KPIs to monitor progress. Contrasts between Vision 2030 and its predecessor –Vision 2020 –include a focus on a broader range of sustainability issues and tighter alignment with both the UN SDGs and the Paris Agreement, increased stakeholder engagement.

We adhering ESG principles which guide our Forest Conservation Policy and Sustainability Roadmap Vision 2030, we strive to fulfil our commitment to protect forests, support communities, preserve biodiversity and achieve carbon neutrality across our operations by 2030.

Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognise our responsibility to protect local water sources at each of our mill sites, we do this by minimising consumption and ensuring the water we return to source meets the highest environmental standards.

Learn more about APP’s path to operational excellence by reading our Sustainability Reports and Forest Conservation Policy on: www.asiapulppaper.com

W0.2

(W0.2) State the start and end date of the year for which you are reporting data.

W1. Current state

W1.1

(W1.1) Rate the importance (current and future) of water quality and water quantity to the success of your business.

<table>
<thead>
<tr>
<th></th>
<th>Direct use importance rating</th>
<th>Indirect use importance rating</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sufficient amounts of good quality freshwater available for use</td>
<td>Vital</td>
<td>Important</td>
<td>We need a large water consumption of about 29m3 per tonne. We also use the production process water as a raw material solvent, and also use it for generating steam, heating, cooling, and cleaning. We closely monitor water for contaminants and recognize that we have a responsibility to protect local water sources at all of our mill sites. We are constantly striving to reduce our water consumption through the use of the latest technology and initiatives. We have a water treatment plant to process water from the river into water that can be used for the production process, the quantity of water taken from the river has a bigger role than the water quality. In the future we will still depend on water resources from the river, however we also maximize the reuse &amp; recycle process to reduce dependence water from the river.</td>
</tr>
<tr>
<td>Sufficient amounts of recycled, brackish and/or produced water available for use</td>
<td>Important</td>
<td>Neutral</td>
<td>In 2021 we reused &amp; recycled 14% of our water in processes, the amount of reused/recycled water is needed to replace water intake from the river so we categorize it as important.</td>
</tr>

W1.4

(W1.4) Do you engage with your value chain on water-related issues?

Yes, our suppliers
Yes, our customers or other value chain partners

W1.4a

(W1.4a) What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

<table>
<thead>
<tr>
<th>% of suppliers by number</th>
<th>51-75</th>
</tr>
</thead>
<tbody>
<tr>
<td>% of total procurement spend</td>
<td>51-75</td>
</tr>
</tbody>
</table>

Rationale for this coverage

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards.

Impact of the engagement and measures of success

Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner.

Comment
W1.4b

(W1.4b) Provide details of any other water-related supplier engagement activity.

- **Type of engagement**
  - Innovation & collaboration

- **Details of engagement**
  - Educate suppliers about water stewardship and collaboration

- **% of suppliers by number**
  - 51-75

- **% of total procurement spend**
  - 51-75

**Rationale for the coverage of your engagement**
APP engage with 40 supplier of forestry concession. Our main raw material is pulpwood then coverage of supplier is about 51%

**Impact of the engagement and measures of success**
We implement best practices water management for all pulpwood supplier

**Comment**

W1.4c

(W1.4c) What is your organization’s rationale and strategy for prioritizing engagements with customers or other partners in its value chain?

Today, people around the world identify water issues as the most serious sustainability challenges facing the planet. Furthermore, there are increasing concerns about access to water and water pollution have outpaced concerns about other well-recognized sustainability challenges, such as global climate change, natural resource depletion, and biodiversity loss.

Historically, access to water has been an important strategic concern for many companies including APP group, but recent global trends show increased threats to the supply, quality, and reliability of water resources and services, adding substantial immediacy and pressure for business to improve the way it manages water risk.

In response, as chair of the Indonesia Water Mandate Working Group (IWMWG), a special organization under the United Nations Indonesia Global Compact Network, APP has been working to address these water challenges. We have begun developing strategies to mitigate water-related risks and capitalize on opportunities. Some companies are investing in operational efficiencies, such as closed-loop production processes or water recycling. APP and the IWMWG are also exploring alternative technologies, such as biopores, to help mitigate climate-related water issues. Through these international and local collaborations, APP is helping Indonesia press on toward a clean and sustainable water future, one project at a time.

W2. Business impacts

W2.1

(W2.1) Has your organization experienced any detrimental water-related impacts?
- No

W2.2

(W2.2) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?
- No

W3. Procedures

W3.3

(W3.3) Does your organization undertake a water-related risk assessment?
- Yes, water-related risks are assessed

W3.3a

(W3.3a) Select the options that best describe your procedures for identifying and assessing water-related risks.
<table>
<thead>
<tr>
<th>Value chain stage</th>
<th>Supply chain</th>
</tr>
</thead>
<tbody>

<td>Coverage</td>
<td>Full</td>
</tr>
</tbody>
</table>

**Risk assessment procedure**

Water risks are assessed as part of other company-wide risk assessment system

**Frequency of assessment**

Annually

**How far into the future are risks considered?**

1 to 3 years

**Type of tools and methods used**

Other

**Tools and methods used**

Other, please specify (scorecard)

**Contextual issues considered**

Water availability at a basin/catchment level

Water quality at a basin/catchment level

**Stakeholders considered**

Customers

Employees

Local communities

NGOs

Regulators

Suppliers

**Comment**

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards. Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner. In 2012, we began working together with our pulpwood suppliers in implementing the High Conservation Value (HCV) assessment. The assessment, which is also a part of our Natural Forest Moratorium commitment in line with APP Forest Conservation Policy (FCP), is done to recognize areas with outstandingly significant or critically important ecological, social or cultural value. The HCV assessment will enable APP and its suppliers to develop proper management plan for those valuable areas. Water level in peatland area plays a critical role in ensuring hydrology balance in the surrounding ecosystem. To further ensure sustainable water management in our suppliers’ area, together with our pulpwood suppliers we develop Best Practice for Peat Management & Monitoring Plan.
(W3.3b) Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

Water forms an essential part of APP’s production processes, which is why we signed up to the UN CEO Water Mandate in 2012. We announced Forest Conservation Policy (FCP) in February 2013. Both of these commitments set ambitious goals with regard to water management, both within our own operations as well as those in our supply chain. In 2013, we continued to work with various experts and partners to roll out initiatives to help us reach these goals.

Water management in our mills can be divided into two areas; reducing water consumption and maintaining effluent quality from our mill processes. In our supply chain, the focus is on ensuring hydrological balance within the landscape where our pulpwood suppliers’ plantations are located, to support the ecological health of the surrounding ecosystem.

In line with the UN CEO Water Mandate principles, APP continues to reach beyond our operations to address community water challenges. APP will continue to seek sustainable water management innovations. We aim to preserve this precious natural resource for the good of our company, the community and the world globally.

W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, both in direct operations and the rest of our value chain

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

APP investing significant amounts of time, money and resources on initiatives that will not only help the company reduce its water footprint in Indonesia and deliver clean water to the nation’s citizens, but also provide jobs and other economic and social opportunities in communities where APP operates. These many initiatives are underway at the local, national and international levels.

On the global front, APP was the first pulp and paper company in Indonesia to join companies around the world in endorsing United Nations Global CEO Water Mandate, a public-private initiative dedicated to developing strategies and solutions that help solve the emerging global water crisis. According to the United Nations (UN), every day millions of tons of inadequately treated sewage and industrial and agricultural wastes are poured into the world’s waters, leaving 1 billion people without access to a sufficient water supply. In turn, this water contamination weakens or destroys natural ecosystems that support human health, food production, and biodiversity.

In endorsing the UN mandate, APP is working with governments, UN agencies, non-governmental organizations, and other stakeholders to address the global water challenge. APP embraces the Global Mandate’s six core elements: Direct Operations, Supply Chain and Watershed Management, Collective Action, Public Policy, Community Engagement, and Transparency.

APP mills introduced the anaerobic (meaning “without oxygen”) treatment process to Indonesia’s pulp and paper industry. This water treatment process uses bacteria that do not depend on oxygen to convert contaminants in the water. The technology is unique because during conversion these bacteria produced methane gas which can be used as energy for production. The result: clean water and an efficient source of energy.

In addition, to ensure that the quality of their effluent meets or exceeds both Indonesian and world water quality standards, all of APP’s mills treat water with high-efficiency activated sludge and chemical removal processes. And to reduce chemical oxygen demand (COD) levels, each mill employs oxygen bleaching in the water treatment process.

Through continuous innovations of waste water treatment technologies and series of production efficiency, APP strives to reduce its water consumption as well as improve its waste water quality significantly.

W4.2

(W4.2) Provide details of identified risks in your direct operations with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Country/Area & River basin

| Indonesia | Other, please specify (Siak river, Pangabuan river, Baung river, Citarum river, Ciujung river, Cisadane river, Brantas river, Lesti river) |

Type of risk & Primary risk driver

| Chronic physical | Declining water quality |
Primary potential impact
Increased operating costs

Company-specific description
As many company operates in surrounding of river, it will have a risk to water availability and its quality.

Timeframe
More than 6 years

Magnitude of potential impact
Medium-low

Likelihood
Likely

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

Explanation of financial impact
Low quality of rivers such as turbidity, conductivity, pH, salinity, etc. will impact to process-water production. Production planning will be changed and the resource to purify the water will increase.

Primary response to risk
Adopt water efficiency, water reuse, recycling and conservation practices

Description of response
We have water treatment and waste water treatment facility with proper design to make sure all water parameters comply with requirements, both process water specification and effluent water. 3R principles are very important and we believe by doing it, our operation can anticipate abnormalities and even develop a contingency plan in term of incoming raw water quality issues.

Cost of response
1000000

Explanation of cost of response
Investment of water and waste water facility together with operational cost

Country/Area & River basin
Indonesia
Other, please specify (Siak river, Pangabuan river, Baung river, Citarum river, Ciujung river, Citadane river, Brantas river, Lesti river)

Type of risk & Primary risk driver
Chronic physical Water scarcity

Primary potential impact
Increased operating costs

Company-specific description
Continued risks around water quality and availability may have immediate impact to our operations, while other potential risks such as sea water and peat water intrusion might be identified have impact to our operations.

Timeframe
More than 6 years

Magnitude of potential impact
Medium-high

Likelihood
About as likely as not

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

Explanation of financial impact
Pulp and paper industry use a quite substantial amount of water, therefore the disturbance of water source will effect the operation significantly, which in extreme condition it may stop the operation of the facility.

Primary response to risk
Develop drought emergency plans

Primary potential impact
Increased operating costs

Company-specific description
Continued risks around water quality and availability may have immediate impact to our operations, while other potential risks such as sea water and peat water intrusion might be identified have impact to our operations.

Timeframe

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

Explanation of financial impact
Pulp and paper industry use a quite substantial amount of water, therefore the disturbance of water source will effect the operation significantly, which in extreme condition it may stop the operation of the facility.

Primary response to risk
Develop drought emergency plans
**Description of response**
The main anticipated condition in term of water scarcity is the drought. Therefore drought emergency plans should be developed and supported by other mechanism such as efficiency and 3R implementation as well as working together with government and other stakeholders.

**Cost of response**
2000000

**Explanation of cost of response**
This is estimated investment for gap assessment / study, initial mitigation plans up to construction of physical mitigation facility in place (as required).

---

**W4.2a**

(W4.2a) Provide details of risks identified within your value chain (beyond direct operations) with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

**Country/Area & River basin**

</table>

**Primary potential impact**
Constraint to growth

**Company-specific description**
Our supply chain operations impacted by water level in forestry area. Flooding and drought during unusual condition will impacted to the growth of tress as well as pulpwood supply to pulp & paper operations.

**Timeframe**
More than 6 years

**Magnitude of potential impact**
Medium-low

**Likelihood**
Likely

**Are you able to provide a potential financial impact figure?**
No, we do not have this figure

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure - minimum (currency)**
<Not Applicable>

**Potential financial impact figure - maximum (currency)**
<Not Applicable>

**Explanation of financial impact**
Unusual condition such as drought and flooding will impact to pulpwood production and supply to pulp & paper operations.

**Primary response to risk**
Supplier engagement

| Supplier engagement | Promote investment in infrastructure and technologies for water saving, re-use and recycling among suppliers |

**Description of response**
- Our supplier implement procedures to manage water levels in variety season
- Research on plantation tress which more resistant to flooding and drought
- investment of infrastructure to keep water level

**Cost of response**
500000

**Explanation of cost of response**
- cost of research on plantation tress which more resistant to flooding and drought
- cost of investment of infrastructure to keep water level

---

**W4.3**

(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?
Yes, we have identified opportunities, and some/all are being realized
Provide details of opportunities currently being realized that could have a substantive financial or strategic impact on your business.

**Type of opportunity**
Efficiency

**Primary water-related opportunity**
Improved water efficiency in operations

**Company-specific description & strategy to realize opportunity**
Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.

We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source.

In 2021 we reused & recycle 14% of our water in processes, meaning we use less fresh water. At the end of 2021, we had achieved a water intensity reduction of 10%, as compared to a 2018 baseline. In 2021 we are on the track with our SRV commitment with the reduction 26% for COD and BOD.

**Estimated timeframe for realization**
More than 6 years

**Magnitude of potential financial impact**
Medium-high

**Are you able to provide a potential financial impact figure?**
No, we do not have this figure

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact**
The impact will mainly gained from the cost of water intake from surface water source.

APP announced environmental stewardship policy in 2012 which including water efficiency and water management. It is also supported by our mills that certified ISO 14001, water management and efficiency is put on environmental policy that is required by that certification scheme.

We began the Water Sanitation & Hygiene (WASH) program in 2013 by surveying the needs in our local community. This program aims to build latrines and water supply systems, dig and cover sewage systems, create waste management systems, and educate on basic hygiene.

W6.2

(W6.2) Is there board level oversight of water-related issues within your organization?

</tr>
</tbody>
</table>

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?

Yes, direct engagement with policy makers

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

Water is a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.

We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source. In 2021 we reused & recycle 14% of our water in processes, meaning we use less fresh water. At the end of 2021, we had achieved a water intensity reduction of 10%, as compared to a 2018 baseline. In 2021 we are on the track with our SRV commitment with the reduction 26% for COD and BOD. Water use audits have been conducted at the mill since 2015, working backwards from water discharge to water source; the engineering team assess the water balance of the process and identify improvement areas.

We are also member of Pulp Paper Association in Indonesia which is the board for communication and negotiation with Authorities and Stakeholder concerning water related matters.
W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so

W7. Business strategy

W7.1

(W7.1) Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

<table>

We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards. APP is also fully committed to supporting the SDGs. To devise our strategy of meeting these goals, we utilised the UN’s SDG Compass tool to create a detailed map of APP’s and our wider supply chain’s activities and how these directly support the SDGs. Vision 2030 was launched in 2020, and it acted as our comprehensive strategy for sustainability from 2021 until 2030. Vision 2030 covers an increased range of issues, and is aligned with the UN Sustainable Development Goals, and the Paris Agreement on Climate Change. Water is part of a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards. W7.2

(W7.2) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

Row 1

| Water-related CAPEX (+/- % change) | 0 |
| Anticipated forward trend for CAPEX (+/- % change) | 5 |
| Water-related OPEX (+/- % change) | 0 |
| Anticipated forward trend for OPEX (+/- % change) | 0 |

Please explain

No significant investment during reporting year as no significant challenge faced.

W7.3

(W7.3) Does your organization use scenario analysis to inform its business strategy?

<table>
<thead>
<tr>
<th>Use of scenario analysis</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1 No, but we anticipate doing so within the next two years</td>
<td>Some of our operation are integrated to raw material (wood), therefore landscape approach assessment is very critical for identification of long term water security. The analysis started in 2019.</td>
</tr>
</tbody>
</table>
W7.4

(W7.4) Does your company use an internal price on water?

Row 1

Does your company use an internal price on water?
Yes

Please explain
Beside water volume, process water price also contribute as a driving factor in controlling the water usage. The price consists of price of water intake paid to the Authority and the processing cost (energy, chemical, labor). The total price is then divided by total volume, to gain the unit price of water, USD/m³.

W7.5

(W7.5) Do you classify any of your current products and/or services as low water impact?

<table>
<thead>
<tr>
<th>Products and/or services classified as low water impact</th>
<th>Definition used to classify low water impact</th>
<th>Primary reason for not classifying any of your current products and/or services as low water impact</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>No, but we plan to address this within the next two years</td>
<td>Important but not an immediate business priority</td>
<td>Our operations rely heavily on water, which is used for steam generation, heating, cooling, and cleaning. We are constantly working to conserve water by reusing and recycling it as much as possible. We recognize that water scarcity and water stress is a serious climate risk, and we adopt Board-level responsibility in tackling this problem. The majority of our mills are located near bodies of water and ensures easy access. Water scarcity, on the other hand, can also impact our operations, particularly during the dry season. Thus, we must closely monitor water quality, for example, by collaborating with local governments to establish minimum water standards and conducting periodic testing to ensure compliance. Given the importance of water scarcity and the risk that it may pose to our business, we conduct appropriate risk assessments and integrate their findings into our business planning.</td>

W8.1a
(W8.1a) Provide details of your water targets that are monitored at the corporate level, and the progress made.

Target reference number
Target 1

Category of target
Product water intensity

Level
Company-wide

Primary motivation
Reduced environmental impact

Description of target
Achieve 10% reduction in water intensity by 2021, based on 2018 baseline

Quantitative metric
% reduction per unit of production

Baseline year
2018

Start year
2020

Target year
2030

% of target achieved
100

Please explain
Water intensity decreased 10% in 2021 compared to 2018 baseline. In 2021 we maintained our commitment to ensure all our water returned to source was 26% below national and regional limits for COD and BOD.
Goal
Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level
Basin level

Motivation
Corporate social responsibility

Description of goal
Providing clean water services for the community
Implementing community-based sanitation and waste management
Build latrines and water supply systems
Dig and cover sewage systems

Baseline year
2017

Start year
2018

End year
2021

Progress
The programme at Pindo Deli Karawang aims to improve the community’s quality of life, after discussions with the village community, the programme output changed from providing clean water supplies and services for schools. Work was carried out in three schools where nine new handwashing facilities were installed, each unit containing three sinks. The schools also needed new toilets due to their poor condition or complete absence. Work went ahead well, and to ensure that its positive impact continues.

At Tjiwi Kimia mill So far, the project has seen several achievements, showing it was a good coordination between Habitat, Tjiwi Kimia (APP), and the village government. We built trust by opening a dedicated office in the village hall, enabling open, two-way communication about the project, and the community members were established as the first line of support, making it easy to seek help or information if needed. As a result, Tjiwi Kimia was recognised for its efforts by the village community which further improve the relationship between the community and the company. In total, we have installed clean water house connection for 130 families, toilet for 26 families, provide WASH capacity building for 190 communities and 1 unit communal latrine in Singkalan Village.

IKS’s program to improve communities’ access to safe drinking water. IKS constructed 9 wells in 2021, each of well able to supply an average of 50 households.

Goal
Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level
Basin level

Motivation
Shared value

Description of goal
Since 2019, APP worked with the SPEAK Indonesia Foundation (SPEAK) to provide clean water and sanitation for the local community. One area of the project was Kutanegara Village, located near PDK mill, where basic sanitation facilities were built. Training and education on the importance of hygiene and sanitation were also provided under a Community-based Total Sanitation Programme (STBM). The programme's implementation saw a rise in demand for toilet construction. This stimulated economic growth for the STBM group that was formed when the program was implemented. Most of the members of the STBM group are members of the previously existing BUTEKA handicraft SMEs. STBM group involved in construction of toilet facilities, education and socialisation, as well as developing a recycling and handicraft business

Baseline year
2019

Start year
2019

End year
2021

Progress
Since 2019, APP has partnered with the SPEAK Indonesia Foundation (SPEAK) to provide clean water and sanitation services to the Kutanegara Village community. Training and campaigns for a Clean and Healthy Lifestyle, as well as the development of family toilets, are all part of the support. The development of family toilet facilities continues today in collaboration with the Kutanegara Village Community-Based Total Sanitation (STBM) team. By the end 2021, this initiative has constructed a total of 140 family toilets. This demonstrates that public awareness of the importance of a Clean and Healthy Lifestyle is growing. PDK will continue providing support in Kutamekar village, which is also adjacent to the mill location.

W9. Verification

W9.1

(W9.1) Do you verify any other water information reported in your CDP disclosure (not already covered by W5.1a)?
