W0. Introduction

(W0.1) Give a general description of and introduction to your organization.

Asia Pulp & Paper (APP) Sinarmas is responsible for delivering quality products to meet the growing global demand for tissue, packaging and paper. On any given day, our products find their way into the hands of consumers in various branded forms from all over the world.

Started in 1972 with Tjiwi Kimia producing caustic soda, now we run operations across Indonesia and China with an annual combined pulp, paper, packaging product and converting capacity of over 20 million tons per annum. Today, APP markets its products in more than 120 countries across six continents.

Sustainability has always been at the core of our business. We strive to create products and deliver services responsibly through sustainable and innovative processes at every product life stage. Apart from doing our business, we also improve the livelihoods of the communities around us. Our newest sustainability strategy is detailed in our Sustainability Roadmap: Vision (SRV) 2030. The strategy is broken down into three pillars—Production, Forest, and People. We have set ourselves targets for each of these pillars, intending to drive improvement in processes that concern our business, wider supply chain and environmental sustainability. Vision 2030 also details our efforts and strategy in our continued support of the UN’s Sustainable Development Goals (SDGs) and the Paris Agreement on climate change.

Our sustainability strategy has ten targets pillars—Fibre Sourcing, Reforestation, Conservation & Biodiversity, Human Rights & Indigenous People, Community Empowerment, Climate Change, Emissions, Water Management, Solid Waste, and Employee Welfare.

Vision 2030 affects all areas of our business. It is a minutely detailed strategy, with firm targets surrounding sustainability, that uses Company KPIs to monitor progress. Contrasts between Vision 2030 and its predecessor --Vision 2020 --include a focus on a broader range of sustainability issues and tighter alignment with both the UN SDGs and the Paris Agreement, increased stakeholder engagement.

Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognise our responsibility to protect local water sources at each of our mill sites, we do this by minimising consumption and ensuring the water we return to source meets the highest environmental standards.

Learn more about APP’s path to operational excellence by reading our Sustainability Reports and Forest Conservation Policy on: www.asiapulppaper.com

(W0.3) Select the countries/areas for which you will be supplying data.

Indonesia

W0.4

(W0.4) Select the currency used for all financial information disclosed throughout your response.

USD

W0.5
W0.6 Within this boundary, are there any geographies, facilities, water aspects, or other exclusions from your disclosure?

No

W1. Current state

W1.1 Rate the importance (current and future) of water quality and water quantity to the success of your business.

<table>
<thead>
<tr>
<th></th>
<th>Direct use importance rating</th>
<th>Indirect use importance rating</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sufficient amounts of good quality freshwater available for use</td>
<td>Vital</td>
<td>Important</td>
<td>We need a large water consumption it’s about 20m3 per tonne. We also use the production process water as a raw material solvent, and also use it for generating steam, heating, cooling, and cleaning. We closely monitor water for contaminants and recognize that we have a responsibility to protect local water sources at all of our mill sites. We are constantly striving to reduce our water consumption through the use of the latest technology and initiatives. We have a water treatment plant to process water from the river into water that can be used for the production process, the quantity of water taken from the river has a bigger role than the water quality. In the future we will still depend on water resources from the river, however we also maximize the reuse &amp; recycle process to reduce dependence water from the river.</td>
</tr>
<tr>
<td>Sufficient amounts of recycled, brackish and/or produced water available for use</td>
<td>Important</td>
<td>Neutral</td>
<td>In 2020 we reused &amp; recycled 13% of our water in processes, the amount of reused recycled water is needed to replace water intake from the river so we categorize it as important.</td>
</tr>
</tbody>
</table>

W1.2 Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

| Water withdrawals – total volumes | 100% | We measure continuously the water intake / withdrawal from the water sources by using online measurement devices. All of our operation have to ensure proper and comprehensive water balance besides measurement is one of the mandatory requirements set by the Authority. |
| Water withdrawals – volumes by source | Not relevant | In all of our operations, we make sure that we will not take any water sourced from water stressed area. |
| Entrained water associated with your metals & mining sector activities – total volumes (only metals and mining sector) | <Not Applicable> | <Not Applicable> |
| Produced water associated with your oil & gas sector activities – total volumes (only oil and gas sector) | <Not Applicable> | <Not Applicable> |
| Water withdrawals quality | 100% | The intake water quality is very important and it will decide the raw water treatment method that we need to implement in our operation facilities. This is also to optimize the total water usage and not discharge too much volume back to the environment (back washing). |
| Water discharges – total volumes | 100% | We continuously measure the discharge rate by installing a continuous flow metering devices, to ensure: - We balance the total water intake, consumption and the discharge - to make sure the water lost during distribution is under control and as minimum as possible within the best acceptable manufacturing practices - able to make water emission load calculation - meet the requirements of the government regarding water discharge. |
| Water discharges – volumes by destination | 100% | Discharge volume is continuously measured and this will be implemented in all of discharge points. Most of our mills have single discharge point, however one of them has 2 discharge points, to follow technical decision and circumstances set by the Authority. |
| Water discharges – volumes by treatment method | 100% | All discharges despite the treatment method applied by the mills, are fully measured continuously. |
| Water discharge quality – by standard effluent parameters | 100% | All effluent parameters are checked in regular basis either by manually test (laboratory test) or by online system. Effluent parameters and their monitoring result are mandatory by the government and have them reported to government in regular basis. Full compliance against effluent parameters are our utmost target in all of operation facilities. |
| Water discharge quality – temperature | 100% | Temperature is not a mandatory parameter by the government, however, our mills ensure that temperature of effluent is around the ambient temperature. Temperature is checked during operation but not in regular basis. |
| Water consumption – total volume | 100% | Refer to the above, we make sure that we have proper and comprehensive water balance, including all streams to all production lines. |
| Water recycled/reused | 100% | Volume of recycled water is part of important element of water balance, hence they are measured as required. |
| The provision of fully-functioning, safely managed WASH services to all workers | 100% | Non production consumption of clean water is also important element of water balance, hence they are also monitored and measured. |
(W1.2b) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, and how do these volumes compare to the previous reporting year?

<table>
<thead>
<tr>

**Rationale for this coverage**

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards.

**Impact of the engagement and measures of success**

Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner.

**Rationale for the coverage of your engagement**

APP engage with 39 supplier of forestry concession. Our main raw material is pulpwood then coverage of supplier is about 53%.

**Impact of the engagement and measures of success**

We implement best practices water management for all pulpwood supplier.

**Comment**

(W1.4c) What is your organization’s rationale and strategy for prioritizing engagements with customers or other partners in its value chain?

Today, people around the world identify water issues as the most serious sustainability challenges facing the planet. Furthermore, there are increasing concerns about access to water and water pollution have outpaced concerns about other well-recognized sustainability challenges, such as global climate change, natural resource depletion, and biodiversity loss.

Historically, access to water has been an important strategic concern for many companies including APP group, but recent global trends show increased threats to the supply, quality, and reliability of water resources and services, adding substantial immediacy and pressure for business to improve the way it manages water risk.

In response, as chair of the Indonesia Water Mandate Working Group (IWMWG), a special organization under the United Nations Indonesia Global Compact Network, APP has been working to address these water challenges. We have begun developing strategies to mitigate water-related risks and capitalize on opportunities. Some companies are investing in operational efficiencies, such as closed-loop production processes or water recycling. APP and the IWMWG are also exploring alternative technologies, such as biopores, to help mitigate climate-related water issues. Through these international and local collaborations, APP is helping Indonesia press on toward a clean and sustainable water future, one project at a time.

**W2. Business impacts**

**W2.1**

(W2.1) Has your organization experienced any detrimental water-related impacts?

No

**W2.2**
(W2.2) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations? No

W3. Procedures

W3.3

(W3.3) Does your organization undertake a water-related risk assessment? Yes, water-related risks are assessed

Comment
A Water Footprint Assessment has been undertaken in partnership with Nalco, one of the world’s leading innovators in clean water technology and solutions, to conduct a company-wide water foot-printing analysis based on guidelines developed by The Water Footprint Network. The assessment will provide a baseline for APP to develop a more detailed roadmap for sustainable water management in its manufacturing processes, including extended plans for water reduction programmes in each mill. Due to the intensive and detailed nature of the assessment, we completed the assessment for all mills by 2015. In addition to the on-going Water Footprint Assessment, all of our mills continue to implement various water improvement programmes, including reduction in water consumption, increase efficiency and water quality enhancement.

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards. Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner. In 2012, we began working together with our pulpwood suppliers in implementing the High Conservation Value (HCV) assessment. The assessment, which is also a part of our Natural Forest Moratorium commitment in line with APP Forest Conservation Policy (FCP), is done to recognize areas with outstandingly significant or critically important ecological, social or cultural value. The HCV assessment will enable APP and its suppliers to develop proper management plan for those valuable areas. Water level in peatland area plays a critical role in ensuring hydrology balance in the surrounding ecosystem. To further ensure sustainable water management in our suppliers’ area, together with our pulpwood suppliers we develop Best Practice for Peat Management & Monitoring Plan.

W3.3d Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

Water forms an essential part of APP’s production processes, which is why we signed up to the UN CEO Water Mandate in 2012.

We announced Forest Conservation Policy (FCP) in February 2013. Both of these commitments set ambitious goals with regard to water management, both within our own operations as well as those in our supply chain. In 2013, we continued to work with various experts and partners to roll out initiatives to help us reach these goals.

Water management in our mills can be divided into two areas; reducing water consumption and maintaining effluent quality from our mill processes. In our supply chain, the focus is on ensuring hydrological balance within the landscape where our pulpwood suppliers’ plantations are located, to support the ecological health of the surrounding ecosystem.

In line with the UN CEO Water Mandate principles, APP continues to reach beyond our operations to address community water challenges. APP will continue to seek sustainable water management innovations. We aim to preserve this precious natural resource for the good of our company, the community and the world globally.

W4. Risks and opportunities

W4.1
(W4.1a) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?
Yes, both in direct operations and the rest of our value chain

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

APP investing significant amounts of time, money and resources on initiatives that will not only help the company reduce its water footprint in Indonesia and deliver clean water to the nation's citizens, but also provide jobs and other economic and social opportunities in communities where APP operates. These many initiatives are underway at the local, national and international levels.

On the global front, APP was the first pulp and paper company in Indonesia to join companies around the world in endorsing United Nations Global CEO Water Mandate, a public-private initiative dedicated to developing strategies and solutions that help solve the emerging global water crisis. According to the United Nations (UN), every day millions of tons of inadequately treated sewage and industrial and agricultural wastes are poured into the world's waters, leaving 1 billion people without access to a sufficient water supply. In this turn, water contamination weakens or destroys natural ecosystems that support human health, food production, and biodiversity.

In endorsing the UN mandate, APP is working with governments, UN agencies, non-governmental organizations, and other stakeholders to address the global water challenge. APP embraces the Global Mandate’s six core elements: Direct Operations, Supply Chain and Watershed Management, Collective Action, Public Policy, Community Engagement, and Transparency.

APP mills introduced the anaerobic (meaning “without oxygen”) treatment process to Indonesia’s pulp and paper industry. This water treatment process uses bacteria that do not depend on oxygen to convert contaminants in the water. The technology is unique because during conversion these bacteria produced methane gas which can be used as energy for production. The result: clean water and an efficient source of energy.

In addition, to ensure that the quality of their effluent meets or exceeds both Indonesian and world water quality standards, all of APP’s mills treat water with high-efficiency activated sludge and chemical removal processes. And to reduce chemical oxygen demand (COD) levels, each mill employs oxygen bleaching in the water treatment process.

Through continuous innovations of waste water treatment technologies and series of production efficiency, APP strives to reduce its water consumption as well as improve its waste water quality significantly.

W4.1b

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

<table>
<thead>
<tr>
<th>Total number of facilities exposed to water risk</th>
<th>% company-wide facilities this represents</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>100</td>
<td>APP has 10 mills that exposed to water risk. Water is essential to the pulp and paper making process, from stock preparation where the pulp is diluted into water for further processing, through to its conversion to steam for process heat and electricity generation. It's a water intensive process, but one that offers the opportunity to recycle and re-use a significant amount of water, reducing the amount of water our mills withdraw from local sources. As one of the first companies in Indonesia that pledged to The UN Global Compact CEO Water Mandate programme, we have a challenging task to ensure that a responsible approach to water management is implemented not only within our operating facilities but also across our supply chain. It is one of our strategic goals highlighted in our Roadmap and a key metric measured by our mills. Our mills focus on two areas; reducing water consumption and maintaining efficient quality from our mill processes. Reduced water consumption is achieved through reducing absolute consumption and increasing water re-use in our processes. A Water Footprint Assessment has been undertaken in partnership with Nalco, one of the world’s leading innovators in clean water technology and solutions, to conduct a company-wide water foot-printing analysis based on guidelines developed by The Water Footprint Network. The assessment will provide a baseline for APP to develop a more detailed roadmap for sustainable water management in its manufacturing processes, including extended plans for water reduction programmes in total 10 mills. Our commitment toward sustainable water management also applies to our pulpwood suppliers. These commitments are reflected in our Forest Conservation Policy. During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards. Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner. In 2012, we began working together with our pulpwood suppliers in implementing the High Conservation Value (HCV) assessment. The assessment, which is also a part of our Natural Forest Moratorium commitment in line with APP Forest Conservation Policy (FCP), is done to recognize areas with outstandingly significant or critically important ecological, social or cultural value. The HCV toolkit identifies 6 types of high conservation values within a forest that needs to be protected; among them are forest areas that provide basic service of nature in critical situations and forest areas fundamental in meeting basic needs of local communities. The HCV assessment will enable APP and its suppliers to develop proper management plan for those valuable areas. Water level in peatland area plays a critical role in ensuring hydrology balance in the surrounding ecosystem. To further ensure sustainable water management in our suppliers’ area, together with our pulpwood suppliers we are currently developing Best Practice for Peat Management &amp; Monitoring Plan (PMMP). The Plan will be developed based on assessment and recommendations from internationally recognized team of peat experts. An assessment to find best approach in peatland management will also be a part of our HCV assessment. APP committed to zero new development on peatland, including canal &amp; infrastructure construction, before assessment and best practice recommendation from peat experts are completed. The result of these various assessments; HCV, Scorecard and Peat assessment, will feed into the Integrated Sustainable Forest Management APP and its suppliers are currently developing. The integrated management system will help ensure, amongst others, improved water and watershed management within the concession areas which will also affect water condition in the surrounding landscape.</td>

Primary potential impact
Increased operating costs

Company-specific description
As many company operates in surrounding of river, it will have a risk to water availability and its quality.

Timeframe
More than 6 years

Magnitude of potential impact
Medium-low

Likelihood
Likely

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

Explanation of financial impact
Low quality of rivers such as turbidity, conductivity, pH, salinity, etc. will impact to process-water production. Production planning will be changed and the resource to purify the water will increase.

Primary response to risk
Adopt water efficiency, water reuse, recycling and conservation practices

Description of response
We have water treatment and waste water treatment facility with proper design to make sure all water parameters comply with requirements, both process water specification and effluent water. 3R principles are very important and we believe by doing it, our operation can anticipate abnormalities and even develop a contingency plan in term of incoming raw water quality issues.

Cost of response
1000000

Explanation of cost of response
Investment of water and waste water facility together with operational cost

Country/Area & River basin

Type of risk & Primary risk driver

| Physical | Increased water scarcity |

Primary potential impact
Increased operating costs

Company-specific description
Continued risks around water quality and availability may have immediate impact to our operations, while other potential risks such as sea water and peat water intrusion might be identified have impact to our operations.

Timeframe
More than 6 years

Magnitude of potential impact
Medium-High

Likelihood
About as likely as not

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure - minimum (currency)
<Not Applicable>

Potential financial impact figure - maximum (currency)
<Not Applicable>

Explanation of financial impact
Pulp and paper industry use a quite substantial amount of water, therefore the disturbance of water source will effect the operation significantly, which in extreme condition it may stop the operation of the facility.

Primary response to risk
Develop drought emergency plans

Description of response
The main anticipated condition in term of water scarcity is the drought. Therefore drought emergency plans should be developed and supported by other mechanism such as efficiency and 3R implementation as well as working together with government and other stakeholders.

Cost of response
2000000

Explanation of cost of response
This is estimated investment for gap assessment / study, initial mitigation plans up to construction of physical mitigation facility in place (as required).
(W4.2a) Provide details of risks identified within your value chain (beyond direct operations) with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

**Country/Area & River basin**

| Indonesia | Other, please specify (river surrounding of forestry operations) |

**Stage of value chain**

Supply chain

**Type of risk & Primary risk driver**

| Physical | Seasonal supply variability/inter annual variability |

**Primary potential impact**

Constraint to growth

**Company-specific description**

Our supply chain operations impacted by water level in forestry area. Flooding and drought during unusual condition will impacted to the growth of trees as well as pulpwood supply to pulp & paper operations.

**Timeframe**

More than 6 years

**Magnitude of potential impact**

Medium-low

**Likelihood**

Likely

**Are you able to provide a potential financial impact figure?**

No, we do not have this figure

**Potential financial impact figure (currency)**

<Not Applicable>

**Potential financial impact figure - minimum (currency)**

<Not Applicable>

**Potential financial impact figure - maximum (currency)**

<Not Applicable>

**Explanation of financial impact**

Unusual condition such as drought and flooding will impact to pulpwood production and supply to pulp & paper operations.

**Primary response to risk**

| Supplier engagement | Promote investment in infrastructure and technologies for water saving, re-use and recycling among suppliers |

**Description of response**

- Our supplier implement procedures to manage water levels in variety season - Research on plantation trees which more resistant to flooding and drought - investment of infrastructure to keep water level

**Cost of response**

50,0000

**Explanation of cost of response**

- cost of research on plantation trees which more resistant to flooding and drought - cost of investment of infrastructure to keep water level

---

**W4.3**

(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?

Yes, we have identified opportunities, and some/all are being realized

---

**W4.3a**
(W4.3a) Provide details of opportunities currently being realized that could have a substantive financial or strategic impact on your business.

**Type of opportunity**
- Efficiency

**Primary water-related opportunity**
- Improved water efficiency in operations

**Company-specific description & strategy to realize opportunity**
Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards. We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source. In 2020 we reused & recycle 13% of our water in processes, meaning we use less fresh water. At the end of 2020, we had achieved a water intensity reduction of 8%, as compared to a 2018 baseline. In 2020 we are on the track with our SRV commitment with the reduction 26% for COD and BOD.

**Estimated timeframe for realization**
- More than 6 years

**Magnitude of potential financial impact**
- Medium-High

**Are you able to provide a potential financial impact figure?**
- No, we do not have this figure

**Potential financial impact figure (currency)**
- <Not Applicable>

**Potential financial impact figure – minimum (currency)**
- <Not Applicable>

**Potential financial impact figure – maximum (currency)**
- <Not Applicable>

**Explanation of financial impact**
The impact will mainly gained from the cost of water intake from surface water source.

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?

Yes, direct engagement with policy makers

W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

Water is a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.

We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source. In 2020 we reused & recycle 13% of our water in processes, meaning we use less fresh water. At the end of 2020, we had achieved a water intensity reduction of 8%, as compared to a 2018 baseline. In 2020 we are on the track with our SRV commitment with the reduction 26% for COD and BOD. Water use audits have been conducted at the mill since 2015, working backwards from water discharge to water source; the engineering team assess the water balance of the process and identify improvement areas.

We are also member of Pulp Paper Association in Indonesia which is the board for communication and negotiation with Authorities and Stakeholder concerning water related matters.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so

W7. Business strategy
### W7.1

**Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?**

<table>
<thead>
<tr>
<th>Are water-related issues integrated?</th>
<th>Long-term business objectives</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes, water-related issues are integrated</td>
<td>Vision 2030 was launched in 2020, and it acted as our comprehensive strategy for sustainability from 2021 until 2030. Vision 2030 is an evolution from APP’s previous strategy Vision 2020 and has been developed through extensive internal and external consultation. Compared to Vision 2020, Vision 2030 covers an increased range of issues, and is aligned with the UN Sustainable Development Goals, and the Paris Agreement on Climate Change. Water is part of a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards. APP is also fully committed to supporting the SDGs. To devise our strategy of meeting these goals, we utilised the UN’s SDG Compass tool to create a detailed map of APP’s and our wider supply chain’s activities and how these directly support the SDGs.</td>

**Primary motivation**
Reduced environmental impact

**Description of target**
Achieve 8% reduction in water intensity by 2020, based on 2018 baseline

**Quantitative metric**
% reduction per unit of production

**Baseline year**
2018

**Start year**
2020

**Target year**
2030

**% of target achieved**
8

**Please explain**
Water intensity decreased 8% in 2020 compared to 2018 baseline. In 2020 we maintained our commitment to ensure all our water returned to source was 26% below national and regional limits for COD and BOD.

W8.1b
Goal
Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level
Basin level

Motivation
Corporate social responsibility

Description of goal
Providing clean water services for the community Implementing community-based sanitation and waste management Build latrines and water supply systems Dig and cover sewage systems

Baseline year
2017

Start year
2018

End year
2020

Progress
The programme at Pindo Deli Karawang aims to improve the community's quality of life, after discussions with the village community, the programme output changed from providing clean water services for the community to providing clean water supplies and services for schools. Work was carried out in three schools where nine new handwashing facilities were installed, each unit containing three sinks. The schools also needed new toilets due to their poor condition or complete absence. Work went ahead well, and to ensure that its positive impact continues. And at Tjiwi Kimia mill So far, the project has seen several achievements, showing it was a good one-way communication about the project, and the community members were established as the first line of support, making it easy to seek help or information if needed. As a result, Tjiwi Kimia was recognised for its efforts by the village community which further improve the relationship between the community and the company. In total, we have installed clean water house connection for 130 families, toilet for 26 families, provide WASH capacity building for 190 communities and 1 unit communal latrine in Singkalan Village.

Goal
Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level
Basin level

Motivation
Shared value

Description of goal
Since 2019, APP worked with the SPEAK Indonesia Foundation (SPEAK) to provide clean water and sanitation for the local community. One area of the project was Kutanegara Village, located near PDK mill, where basic sanitation facilities were built. Training and education on the importance of hygiene and sanitation were also provided under a Community-based Total Sanitation Programme (STBM). The programme’s implementation saw a rise in demand for toilet construction. This stimulated economic growth for the STBM group that was formed when the program was implemented. Most of the members of the STBM group are members of the previously existing BUTEKA handicraft SMEs. STBM group involved in construction of toilet facilities, education and socialisation, as well as developing a recycling and handicraft business

Baseline year
2019

Start year
2019

End year
2020

Progress
By the end of the programme with SPEAK in 2019, 80 toilets had been constructed. In 2020, this has increased to 125 toilets, with community-led initiatives and funds managed by the village institution. Through their effort, Kutanegara village is now recognised as one of the pioneers in the Government’s Open Defecation-Free Programme. Through their success in implementing community-based sanitation and waste management, the village is also designated as sampling for the government’s programme to eradicate stunting

W-FI

(W-FI) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.

APP's Vision 2030 Roadmap include clear environmental commitments for our mills, focussed on our energy, carbon, water and waste. Aiming to achieve the highest standard of global environmental efficiency we are continuously investing in new equipment, process improvements and encourage continuous behavioural change to drive efficiency across all our operations. We combine national environmental guidelines with international environmental standards, supported by a KPI monitoring system to ensure compliance and drive performance improvements.

The UN Global Compact CEO Water Mandate programme, of which APP is a signatory, requires us to set an example by adopting a responsible approach to water management. With increasing global pressure on water resources, we recognise our responsibility to minimise its use and ensure any waste water we return to source is clean and safe.
